

Abstract

Motorcycle Wheel Maintenance Support

5 A maintenance support (10) for a motorcycle wheel (30) has a base
frame (11) with a working area (14) defined between a pair of opposed side
walls (12) and a pair of spaced parallel axles (15) extending transversely from
one side wall (12) to the other. Each axle (15) is provided with a pair of
spaced rollers (16) adapted to support a motorcycle wheel (30) thereon. Each
10 roller (16) is mounted on its respective axle (15) for free rotation,
independently of the other roller (16) of the pair, and each pair of rollers (16)
co-operates to present a generally V-shaped profile to a motorcycle wheel
(30) located on the maintenance support (10).
